Wade...Here's an extract from HAZMAT of the local and current inventories from HAZMAT for this stuff. This includes all HAZMAT sites, so would you please forward to whoever at the other sites might be interested in it? Thanks.

BTW, the LOCAL INVENTORY refers to a storage areas list of materials it CAN store (i.e. its list of approved materials), and the number in this column is the maximum inventory level. CURRENT INVENTORY refers to the ACTUAL amount that's there (or that HAZMAT thinks is there), and the quantity shown is the current on-hand amount.
